

# NETWORK SECURITY AND THEFT OF DATA COVERAGE ENDORSEMENT

**You’ve built a successful accounting firm. Does your insurance coverage fully protect it?**

Today, accounting firms are increasingly reliant on technology to do business. Even the most traditional “brick and mortar” firms rely on information technology to conduct day-to-day operations. Technology has positively affected organizations in a number of ways, including decreased operational costs, increased speed to market and improved customer service.

This increased reliance on technology, however, comes with a downside. Hackers, malicious software, rogue employees and hardware loss or theft are all very real risks to your business. The Hartford can help to protect you from these risks with the “Network Security and Theft of Data Coverage Endorsement”.
